

AmnioTest™

Rapid Amniotic fluid swab test

The AmnioTest™ is designed to assist in the detection of rupture of the fetal membranes, based on elevation of the pH in the upper vagina consistent with leakage of amniotic fluid. The sterile swab impregnated with nitrazine yellow dye, offers a rapid, reliable, cost effective and simple to use point-of-care test to aid in the detection of amniotic fluid in patients with suspected PROM.

- * Sterile for patient safety
- * Rapid, safe and easy to use
- * Test results in 15 seconds
- * No speculum required
- * Easy peel opening
- * 2-year shelf life
- * Canadian manufactured product
- * Easy to QC with available buffers to match colour interpretation card
- * Education PowerPoint available for staff training to meet POC requirements

AmnioTest™

Rapid Amniotic fluid swab test

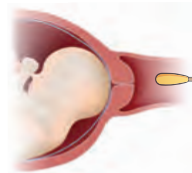

1 Peel

Remove swab from protective sleeve (keep swab tip dry away from any liquid)

2 Collect Sample

Insert swab into vagina ensuring that nitrazine tip gently comes in contact with the upper cervical area for about 15 seconds

3 Interpret result

Carefully remove swab from vagina and immediately examine colour with AmnioTest™ colour card
